

The AQUA BLUE

REVERSE OSMOSIS SYSTEM

5-Micron Sediment Filter

- Removes dirt and sediment in your water, protecting the system from clogging and slow flow

Carbon Block Filter

- Removes chlorine, bad tastes, and odors
- Excellent chemical contaminant reduction
- Protects the reverse osmosis membrane

50-GPD Reverse Osmosis Membrane

- Rejects 90-95% of non-living contaminants including Aluminum, Cyanide, Barium Cadmium, Copper, Sodium, Fluoride, Lead, Mercury, Nitrate and many more
- Provides the closest thing to PURE H2O

Post Carbon Filter

- Granular activated coconut carbon
- Removes unpleasant odors and bad taste
- Known as the "polishing" filter

The Aqua Blue Deluxe

The deluxe system includes an extra carbon filter and a permeate pump. The additional carbon filter provides greater protection for the RO membrane. The permeate pump uses no electricity, and reduces waste water by up to 80%, while filling the holding tank up to four times faster.
